CARBON FIBRE STEERING WHEEL

CARBON FIBRE STEERING WHEEL

F12 berlinetta

The steering wheel is a direct link between the vehicle and the driver, a heart that transforms an idea into action with its beat. This carbon fibre option enhances its sporty nature. In this configuration, Ferrari Genuine gives you the option of having LEDs in the upper part of the steering wheel, an aid to sportier driving inherited directly from experience in Formula 1.

The leather part of the steering wheel can be personalised both in terms of the colour of the leather and the colour of the stitching.
