LOONGLIFE BATTERY

F12 tdf

For situations where using the standard battery conditioner is not always feasible, Ferrari Genuine offers a new longlife battery, developed, tested and optimised for superior power, performance and durability. The Ferrari battery is made with plates in 99.99% pure lead. This purity means that the plates may be made thinner and more compact, reducing wasted space between cells and increasing the number of plates usable in the battery, which translates to more surface area and, as a result, more power.
