TITANIUM FUEL FILLER FLAP

F12 tdf

The technology and materials used to create the titanium fuel filler cap are carried over directly from Ferrari's experience in Formula 1.

The filler flap is made by precision machining very high quality materials and is built along the same lines as the standard fuel filler flap.

Hand polishing and brushing by expert craftsmen and its laser engraved Prancing Horse logo make this highly exclusive product unique.

As no protective paint finish is needed to ensure the corrosion resistance and longevity of the component, the natural beauty of this material, which embodies the exclusiveness, quality, style and advanced technology typical of the Ferrari brand, is revealed in full.
