INNER DIGITAL MIRROR

INNER DIGITAL MIRROR

FERRARI
296 GTB

It is possible to request a kit to install a digital inner mirror.

Thanks to a small camera installed at the rear of the car, it is possible to reproduce images directly on the glass of the rear-view mirror. The system guarantees a much wider viewing angle than the traditional mirror, covering most blind spots.

This mirror adds further advantages when driving on the track by more precisely monitoring the position of the car following, helping in slipstream defence, overtaking, braking and cornering manoeuvres.

Using a button it is always possible to deactivate the screen and switch to analogue mode, taking advantage of the standard mirror with its electrochromic functionality.
