## ATHERMIC WINDSCREEN

Ferrari  
*California*

Ferrari offers a completely transparent athermic windscreen to replace the conventional windscreen.

This windscreen filters over 30% of UV light - five times more than a conventional screen.

This prevents excessive heating of the passenger compartment, maximising occupant comfort while protecting the interior trim against exposure to sunlight, and also improves fuel efficiency by reducing the load on the climate control system.

This windscreen does not interfere with GPS systems or RFID electronic toll payment systems.
