The Speciale Handling kit lets customers discover a whole new sports performance for their car. The pack, which replaces standard components such as the shock absorbers, suspension arms and suspension ECUs, transforms the behaviour of the car, making it more responsive and sportier, while accentuating the distinctly GT aspect of its character.

The result is a car that expresses the pure essence of Ferrari DNA in terms of sports performance and dynamism. The Speciale Handling kit combines driving pleasure with performance to create a truly unique experience behind the wheel.
