PERFORMANCE KIT SF90

PERFORMANCE KIT SF90

SF90 SPIDER

Ferrari Genuine offers a performance kit for the SF90 Stradale and SF90 Spider, consisting of a set of carbon fibre wheels and a set of high performance Michelin tires.

This kit effectively contributes to improving the performance of the vehicle - as these wheels, which are made entirely from carbon fibre, weigh 20% less than the equivalent forged components - while also giving the car a sportier and more aggressive look.

The result of a partnership between Ferrari and Michelin, the Michelin Pilot Sport Cup 2 R track tires have been developed to offer outstanding grip and precision and improve lap times.

Together, these wheels and tyres contribute significantly to reducing the overall weight of the vehicle, with tangible benefits especially in terms of handling and responsiveness under acceleration and braking.

On top of all this, the exclusive design of the performance kit also complements and accentuates the original style of these models.
